The right washing machine for you will depend on your individual situation and personal preferences. Ask yourself these questions to help you narrow your search: How often do I wash my clothes? How many people are in my household? How much do I want to spend? Which features are most important to me? Do I want a top-or front-loading machine? Your washing machine is an important part of your home, so think a little and research your next purchase to make sure your new appliances are all you expect. There are two options to choose from when buying a washing machine: front-loader and top-loader. The obvious difference between the two is where you load and unpack your clothes, but they also differ in the way they wash. While the top-loader moves clothes using an agitator or impeller, the front-loading washer uses a rotating drum to make the movement fall. As a result, the front-loader takes up less floor space, is more energy efficient and water efficient, and provides better washing performance. The downside is that it costs more up front, has a longer washing cycle and you often can't add stuff in the middle of the cycle. Can't decide? Do you need a front-loading washer or a top-loading washing machine? See our comparison of the two below: Front-loaders More energy efficient Use less water Soft on clothes take up less floor space No need as much detergent More expensive Many machines don't allow you to add items to the middle of the washing cycle Heavier than top-loading machines Can add mid-cycle items Not as efficient Not soft on clothes Taking up more floor space You can determine what you know your budget and needs, compare some models that fit your criteria to help you choose the right one for you and your family to conduct our independent research for our list of best washing machines, taking into account factors such as price, capacity, energy efficiency and additional features.
